

Positioning Infants and Toddlers for Toothbrushing

Child's head in your lap

Stabilize child's head

Knee-to-knee position

- Place infants and toddlers in a position that allows you to see inside their mouth, and that is safe for the child: (1) on the floor with their head in your lap, (2) on the changing table, etc.
- Make sure to stabilize child's head during toothbrushing.
- Have a partner help the brushing in the knee-to-knee position.
